FYP PROJECT

IGNITE Project Code: NGIRI-2024-27642

Project Title: ETMS Effortless Traffic Management System

Introduction: The Effortless Traffic Management System (ETMS) is an AI-powered solution designed to revolutionize traffic control in urban areas. By utilizing real-time data from cameras and sensors, it dynamically adjusts traffic signals to optimize flow, reduce congestion, and prioritize emergency vehicles. **Problem:**Current traffic management systems rely on fixed signal timers and are inefficient in adapting to real-time conditions, leading to traffic jams, delayed emergency responses, increased pollution, and compromised road safety.**Solution:**ETMS solves these issues by implementing adaptive traffic signals that adjust based on traffic density, detecting incidents in real-time, and prioritizing emergency vehicles. This ensures smoother traffic flow, faster emergency responses, and enhanced safety for both drivers and pedestrians.

Supervisor Details:

Mam Arshia

Faculty of Computer Science &

Information Technology

CoSupervisor Details:

Talha Amjad

Faculty of Computer Science & Informaton

Technology

GROUP MEMBERS Details:

Name: Mudaser Khalid

Roll No: Bcsm-F21-163

Name**:** Azeem Akhtar

Roll No:Bcsm-F21-183

Name: Asad Akhtar

Roll no: Bcsm-f21-168

BILS/INVOICES:

Zain Traders

Ic Transistors, IGBT Modules, LCD & All Industrial Parts Capacitor and Resistor

Azeem 0300-4858881

No.: 4841 Date: 05/06/24

M/s. Quotation Superior University

Sr.#	Qty	Description	Rate	Amount
